

What are Electromagnetic Waves?

Electromagnetic waves which exist only in the vacuum of empty space constitute an ocean of infinite energy called scalar energy. These new waves of energy are called “longitudinal” EM (electromagnetism) to distinguish them from “transverse” EM. A scalar pendant is a therapy pendant, also known as a chi therapy pendant or heat therapy pendant. It emits far-infrared and produces high levels of negative ions. Although negative ions dissipate quickly in the open air, wearing a scalar pendant next to the skin enables the body to absorb them. These pendants neutralize or reduce the negative effects of electromagnetic radiation from cell phones and other electrical appliances used daily.
